

Top **AWS** Services

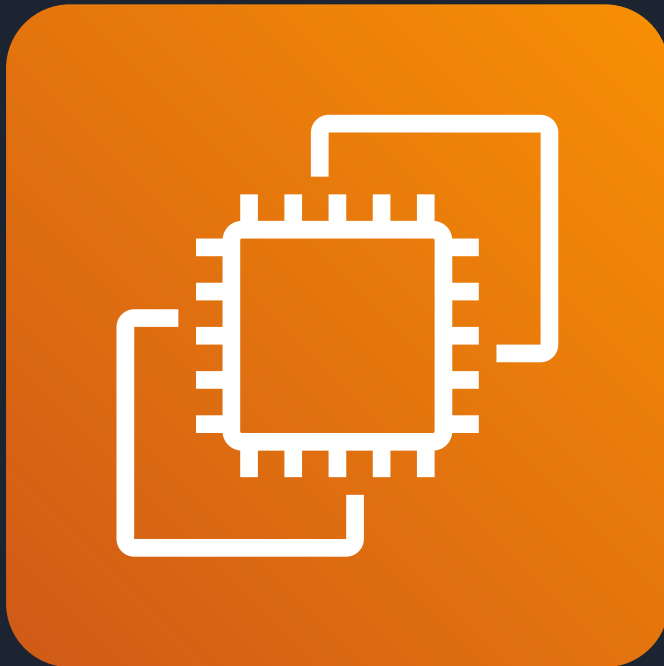

.....

Have you ever seen all the services that AWS offers? A lot, right? To prevent you from getting lost in a world of endless possibilities.

Here is a list of **essential services that can perfectly fit your projects.**

Amazon EC2

You can create servers in minutes with your preferred operating system, having more time to take care of your projects and spending less time maintaining your servers.

Amazon RDS

You'll have dedicated instances for databases in a matter of minutes, fully managed by the AWS support team, being capable of supporting multiple database engines such as SQL, PostgreSQL, and SQL Server.

Amazon Simple Storage Service (S3)

AWS S3 also has high availability, so accessing your information is just a click away. It also has integrations such as PCI-DSS, HIPAA / HITECH, and FedRAMP.

Amazon Cloudfront

Is responsible for managing all your content, delivering it, and presenting it efficiently with minimum latency and high integration with other AWS services.

.....

Amazon VPC

With AWS VPC, you can create a private virtual network where your entire IT environment will live isolated from the outside world, so your information is free of exposure.

We help our clients to integrate new technologies and move forward together.

Contact us anytime you need something related to our AWS services!
